## Study Guide: Comparison of General Public and Real Estate Radon Measurements (Citizen's Guide to Radon/Device Protocols and Home Buyer's and Seller's Guide to Radon/Home Protocols)

| GUIDANCE            | CITIZENS GUIDE/DEVICE PROTOCOLS (General Public)   | BUYERS-SELLERS GUIDE/HOME PROTOCOLS (Real Estate)   |  |  |  |
|---------------------|--|---|--|--|--|
| TEST LOCATION       | Lowest lived-in level such as  | Lowest level of the home that could be used regularly meaning the lowest  |  |  |  |
|                     | regularly used room, e.g.: living room, playroom den,<br>bedroombut not kitchen, laundry room, closet, or<br>bathroom  | level that is going to be used as living whether finished or unfinished   |  |  |  |
|                     | Also where device will not be disturbed & not near draft nor excessive heat or humidity  | Same  |  |  |  |
|                     | ≥ 20"above floor; ≥3' windows & outdoor openings   | Same  |  |  |  |
|                     | $\geq$ 12" exterior wall; $\geq$ 4" from other objects; and if suspended, from 6' to 8' above the floor  | Same  |  |  |  |
| PRETEST CONDITIONS  | If 2 or 3 day test, closed building conditions 12 hours before test begins are <u>required</u> .   | Same  |  |  |  |
|                     | If 4 to 6 days, <u>recommended</u> prior to measurements   | Same  |  |  |  |
| INITIAL TEST        | Short term (≤ 90 days; <u>should</u> be made under closed building conditions)  If a 2 or 3 day test, <u>should</u> avoid testing during unusually   | Should be made under closed building conditions and should avoid testing during unusually severe storms or unusually high winds.  Three Testing Options:  |  |  |  |
|                     | severe storms or unusually high winds.   | 1. Sequential Testing: 2 similar devices deployed in same location for same the duration of time  first test results not reported until second test results and average of both reported.   |  |  |  |
| FOLLOW UP TEST      | <ul> <li> if initial test &lt;4pCi/L follow-up test is probably not needed except in future</li> <li> if initial test ≥4 pCi/L, do follow-up test in same location as initial test follows:</li> <li> if initial test ≥8 pCi/L,</li> <li>do a short-term follow-up (under closed building conditions)</li> <li> if initial test &lt; 8 pCi/L,</li> <li>do a long-term follow-up</li> </ul> | <ul> <li>2. Simultaneous Testing: 2 similar devices deployed 4" apart for same duration</li> <li>if both tests are either ≥ 4pCi/L or if both test results are &lt; 4 pCi/L, report the test results</li> <li>then calculate RPD. When both test results are: <ul> <li>4, if RPD &gt;67%, investigate source of error</li> <li>4, if RPD &gt;36%, investigate source of error</li> <li>if one ≥ 4 pCi/l and one &lt;4pCi/l and the higher result is:</li> <li>2X the lower result, report both results and their average</li> <li>2X the lower result, report both results, the average, and must recommend retesting.</li> </ul> </li> <li>3. Single Test with Continuous Monitor: Requires continuous monitor that integrates and records data hourly. <ul> <li>periodic results are averaged and reported to the client</li> <li>4 hour ramp-up is deducted but must have a minimum of 44 consecutive hours of test results</li> </ul> </li> </ul> |  |  |  |
| MITIGATION DECISION | Always based upon 2 tests average of initial and follow-up short-term tests or the long term follow-up test  | Based upon average of 2 short-term tests <u>or</u> 1 average produced by continuous monitor   |  |  |  |
